Gail Hastings

Colour Notes

Wikipedia: The **CIELAB color space**, also referred to as **L*a*b***, is a *color space* defined by the *International Commission on Illumination* (abbreviated CIE) in 1976.^[a] It expresses color as three values: L* for perceptual lightness and a* and b* for the four *unique colors* of human vision: red, green, blue and yellow.

Wikipedia: In the 1920s, two independent experiments on human color perception were conducted by W. David Wright^[3] with ten observers, and John Guild^[4] with seven observers. Their results laid the foundation for the trichromatic CIE XYZ color space specification.
